

Spring Semester, 2017 GEOG 3320/ 5320 – 001

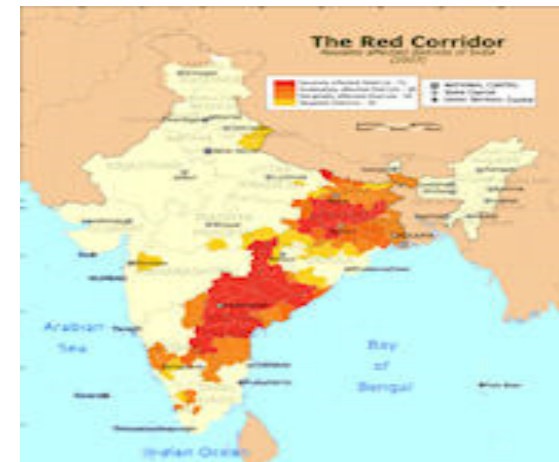

# Geography of International Terrorism and Security

## Meets University International (IR) Requirement

**Tuesday 3:40-6:40pm 3 credit hours Bldg 73- room 105**

Cross listed as GEOG 5320 for graduate credit. This course examines the geographical dimensions of international terrorism and security. The course investigates the geographic factors (geospatial intelligence) that contribute to creating active regions of terrorism, insurgent states and terrorist target areas around the world. Within the security context, the course examines U.S. and international policy on security, especially with regard to the use of geospatial technologies (geographic informationsystems, satellite imagery, global positioning systems) for event mitigation, response and recovery. Issues of surveillance and access to public geospatial information relative to individual freedoms are discussed in a cross-national context.

**Instructor: George F. Hepner**
