

Spring 2017

GEOG 3370 - Utah's Energy Landscape

T/H 10:45 AM-12:05 PM

Utah's Energy Landscape focuses on production and consumption of Utah's indigenous energy resources including coal, natural gas, hydro, petroleum, uranium, geothermal, wind, and solar. In addition to studying the resource itself, students will also obtain an understanding of primary energy generating technologies, their respective distribution systems, and energy policies.
