Fall 2020: GEOG 1100
Exploring the World Through Google Earth
Thursday, 6:00 PM – 9:00 PM on the Sandy Campus

This course provides a broad exploration of important geographic processes that are responsible for global change phenomena. Self-guided labs use Google Earth to analyze datasets related to physical and human geography. This is a great class for anyone interested in environmental issues, environmental changes at regional and global scales, and interactions between humans and the environment. This course fulfills the physical/life science exploration (SF) and Sustainability - Limited (SUSL) requirements.

Please contact tim.edgar@geog.utah.edu with any questions about this course.
