The 21st century demands an understanding of complex systems. An understanding of complex systems leads to new modes of research, management, planning and design, invention and intervention.

This course will explore characteristics of complex dynamic systems, explore a wide range of examples, and methodological approaches to systems modeling.

Students will build system dynamics models based on their own area of study.

Monday:
9:00am - 12:00pm
Professor: Sarah Hinners
Marriott Library: Room 1008
